

Project Euler #2: Even Fibonacci numbers

This problem is a programming version of [Problem 2](#) from [projecteuler.net](#)

Each new term in the Fibonacci sequence is generated by adding the previous two terms. By starting with 1 and 2, the first 10 terms will be:

$$1, 2, 3, 5, 8, 13, 21, 34, 55, 89, \dots$$

By considering the terms in the Fibonacci sequence whose values do not exceed N , find the sum of the even-valued terms.

Input Format

First line contains T that denotes the number of test cases. This is followed by T lines, each containing an integer, N .

Output Format

Print the required answer for each test case.

Constraints

$$1 \leq T \leq 10^5$$
$$10 \leq N \leq 4 \times 10^{16}$$

Sample Input

```
2
10
100
```

Sample Output

```
10
44
```
